

BASIC DAILY CHECK POINTS

To re-order parts, call 330-587-4141

A daily inspection before the crew heads out to the job should consist of the following:

	Are all vehicle and equipment documents including up to date SDS sheets on board?
	Checking all of the fluids/tires/lighting and load weight and load securement of the vehicles and equipment.
	Cross check all material & supply list.
	Once the crew arrives on-site, a job site safety inspection should take place. The inspection should follow after the spray rig has been staged and inspection of the spray foam equipment and material is complete.
	Start the generator and compressor.
	Check the drums to assure material is at the proper temperature recommended by the manufacture.
	Clean the (A) and (B) Y strainers on the spray foam machine.
	Inspect of Personal Protection Equipment (PPE).
	Check operations of both (A) and (B) Transfer pumps.
	Clean, Power Flush and/or lubricate the spray guns.
	Report any new spare parts being used to avoid costly overnight shipping.
	Startup spray equipment, ensuring the machine is in working order.
	Inspect the crew's preparation of the spray area (safety, substrate surface and temperature).
	Spray test shot off target to ensure you are spraying a quality product.
	Test the spray foam for adhesion to the surface.
